

Product Information NGZ 8611

NGZ 8611 is a new semiautomatic coin roll packaging system. The coin rolls are packed in two rows of five pieces into shrink film bags. This way of packing coin rolls meets the requirements of many Central Banks. The high packaging capacity of about 60 rolls per minute is achieved by automatic feeding of the coin rolls into the bag. This enables the operator to prepare the next bag, to put completed packages into the shrinking tunnel and to pick up shrunk packages from the outlet track.

Typical Configuration:

NGZ 8611 with 2 m Horizontal- and Steep Conveyors, 2 Coin Wrappers, Outlet Tracks 90° Angle Section and 1,5 m Straight
(Coin Wrappers, Conveyors and Outlet Tracks are not part of the 8611.)

The NGZ 8611 can be used together with 2 coin wrapping machines in order to achieve the best possible throughput of coins. The unit is controlled by PLC and only a simple foot switch is used to start and stop the unit including the coin wrappers. During operation the automatic feeding of coin rolls into the bags is controlled by the operator putting new bags onto the holders. The current status of the system is indicated by a two colour signal lamp.

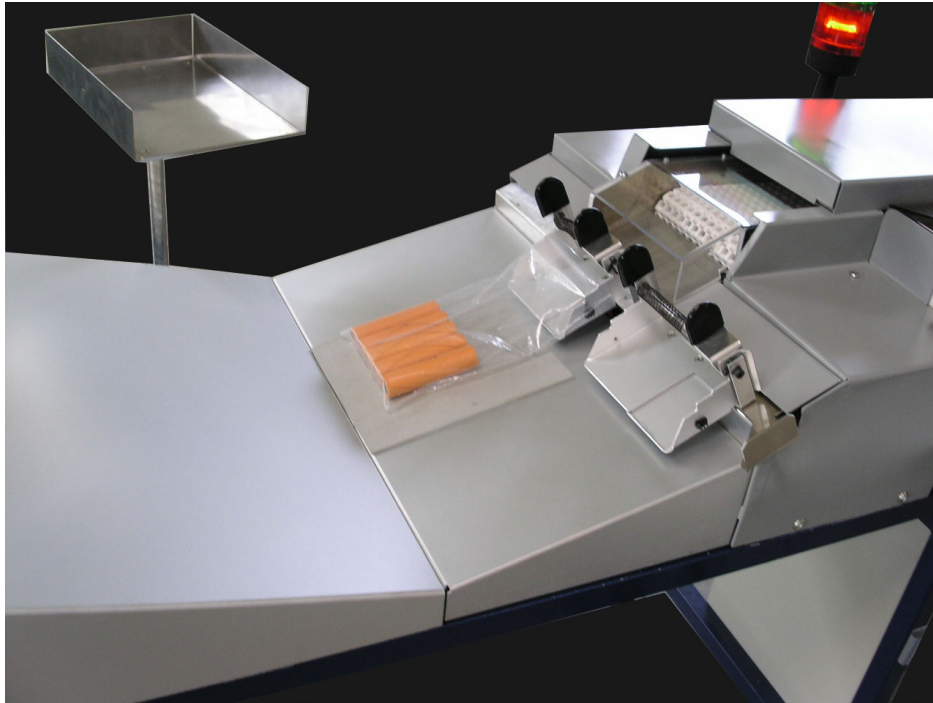

A range of different outlet tracks is available giving flexibility to cope with different room situations. The shrink oven temperature and the oven's conveyor belt speed can be adjusted separately. The 8611 can control up to three coin wrappers.

It is basically possible to use the oven for the packaging of bank notes too.

Product Information NGZ 8611

The automatic filling of the bags allows fast and efficient packaging of coin rolls.

Technical Data:

Packages:	standard packages with 2 rows of 5 coin rolls (10 coin rolls)
Packing Speed:	up to 6 packages (60 rolls) per minute
Conveyors:	recommended: 2 m horizontal for 2 coin wrappers, steep conveyor Please refer to the price list for other lengths of horizontal conveyors.
Outlet Tracks:	recommended: 90° angle section and 1,5 m straight track Please refer to the price list for other outlet tracks.
Power Supply Packaging Table:	230V , 50Hz, 0,25 KW
Power Supply Oven:	3*400V, 50Hz, 7,2 KW
Dimensions:	Packing Table And Oven: 2585 (L) * 900 (B) * 1440(H) [mm]
Required Space:	app. 10 – 11 square meters with 2 coin wrappers, conveyors and outlet tracks
Working Height:	800 mm
